

Unit 9 Q3.4

A. Lebedev

2022-10-27

1. Load data into two dataframes

2. Join two dataframes

```
joint_df <- inner_join(df_house, df_camp, by = 'cand_id')
```

3. Add the column `candidate_party`

```
joint_df <- mutate(joint_df, candidate_party = case_when(
  party == "D" ~ "Democrat",
  party == "R" ~ "Republican",
  TRUE ~ "Other"))
```

Warning: Removed 462 rows containing missing values (geom_point).
